Chair’s Goals

• *for* Humanity Campaign

• Diversity, Equity, Inclusion, and Belonging
There are four key themes to the campaign...

**Arts & Humanities for Insight**
Being deeply human starts with a concerted effort to understand what it means to be human in the first place. Yale students and faculty explore the fullness of the human experience, seeking light and truth in both new and timeless questions.

**Science for Breakthroughs**
As we increase our ability to measure, model, and manipulate the building blocks of our world, we step closer to transformative solutions. Science feeds a pipeline of innovation that can improve millions of lives.

**Collaborating for Impact**
Today’s challenges call for innovative and cross-disciplinary solutions—the kind that arise from human connection. Yale combines a culture of collaboration with a commitment to people, ensuring that the insights of one field can rapidly drive breakthroughs in another.

**Leaders for a Better World**
Our greatest contribution to humanity is the people we send out into the world. By increasing access and making Yale affordable for the most talented scholars—regardless of race, class, or socioeconomic standing—we prepare the leaders who will shape a brighter future for everyone. And so, the university is targeting $1.2 billion during this campaign to increase support for students.
and our science priorities are nested within.

The Data Revolution
From smartphones to medical devices, new technologies capture vast amounts of data. Yale scientists work across every discipline to convert this data into practical knowledge, while ensuring that data use is transparent, ethical, and free of bias.

A New Era for Quantum Science
A global leader, Yale is forging the path toward a practical quantum computer. At the same time, the artificial materials and quantum devices created on our campus promise big changes in industry, energy, and medicine.

Deciphering the Human Brain
Can we fully understand the human brain? Yale researchers say, “yes.” As we study this deeply complex organ, from molecules to mind, we can uncover the causes of neurological disease, learn to restore cognition after injury, and reveal the inner workings of learning, memory, and thinking.

Inflammation in Health and Disease
Scientists at Yale want to know how inflammation is regulated, how it becomes imbalanced, and how that leads to diseases like heart disease, cancer, Alzheimer’s disease, and more. In time, they will open doors to preventing, treating, and curing today’s most pervasive and life-threatening illnesses.

Planetary Solutions
Climate change is one of the most pressing challenges of our time. To meet it, Yale is bridging diverse strengths across the sciences, social sciences, and humanities through the Planetary Solutions Project. A united effort can help us mitigate global warming, adapt to a changing planet, and engage people around the world in positive action.
